Subject: RE: GROUP: FW: How to find dates of deposit of information

Dear Colleagues,

I have enclosed ~~below~~ information below regarding the release date of BM690735.

Accession BM690735 was first released into the GenBank public database on February 28, 2002.

GenBank collaborates with the EMBL database in Europe and the DDBJ database in Japan to produce and distribute the International DNA Sequence Databases. The International DNA Sequence Databases take no responsibility for making any determination of the priority issues for patent claims. We are able only to inform you, to the best of our knowledge, of the release date within a day or two of the pertinent sequence into the public database. We appreciate your understanding and cooperation.

If you need to know the first date of public availability for a specific sequence record, send a message to info@ncbi.nlm.nih.gov. We will check the history of the record for you, and let you know the date of first public release. If the sequence was originally submitted to our collaborators at DDBJ or EMBL, rather than to GenBank, we will ask them to send the release date information to you.

Regards,

Medha Bhagwat, Ph.D.

To whom it may concern,

Is it possible to find the date that a particular cDNA library or a particular EST obtained from that library was publicly available?

If so, I am interested in cDNA library UI-E-CK0 and the EST is BM690735. The only dates in under the BM690735 accession in the NCBI/GenBank are: EST 28-FEB-2002 and a reference to a 1996 publication, which I read as only a reference as to how the library was made, not when the library was made or deposited. What is the significance of the EST 28-FEB-2002 date?

Please let me know.

Thank you in advance for your assistance.
